And, IMO, it is in the drop down+arrayctrl feature where the attractiveness of this control resides, is it not?

So, any precise hint?

Thank you,

Javier

My use (no visual editor)

.h

```
FrameRight<Button> buildmethod;
PopUpTable      methodlist;
EditString       technik;
```

.cpp

```
technik.AddFrame(buildmethod);
buildmethod.SetMonoImage(CtrlImg::SmallDown()).NoWantFocus() ;
buildmethod.WhenPush = THISBACK(DropMethodList);
methodlist.Normal();
methodlist.AddColumn();
methodlist.Grid();
methodlist.WhenSelect = THISBACK(SelectMethod);
```

.....

```
void DropMethodList(){methodlist.PopUp(&technik);}
void SelectMethod(){if(methodlist.IsCursor()) technik <= methodlist.Get(1);}
```

.....

```
while(sql2.Fetch())
    methodlist.Add(sql2[2],Value(Format("%s , %s",sql2[0],sql2[1])));
```

.....
and it's run.
