And, IMO, it is in the drop down+arrayctrl feature where the attractiveness of this control resides, is it not?

So, any precise hint?

Thank you,

Javier

My use (no visual editor)

.h

```
FrameRight<Button> buildmethod;  
PopUpTable      methodlist;  
EditString      technik;
```

.cpp

```
technik.AddFrame(buildmethod);  
    buildmethod.SetMonolImage(CtrlImg::SmallDown()).NoWantFocus() ;  
buildmethod.WhenPush = THISBACK(DropMethodList);  
methodlist.Normal();  
methodlist.AddColumn();  
methodlist.Grid();  
methodlist.WhenSelect = THISBACK(SelectMethod);
```

.....

```
void DropMethodList(){methodlist.PopUp(&technik);}  
void SelectMethod(){if(methodlist.IsCursor()) technik <=& methodlist.Get(1);}
```

.....

```
while(sql2.Fetch())  
    methodlist.Add(sql2[2],Value(Format("%s , %s",sql2[0],sql2[1])));
```

.....

and it's run.
