Hello Mirek

In Package organizer it is possible to set libraries and add compiler and linker options.

There is a problem: if you change the libraries but do not change a line of .cpp or .h files, linker does not work again.

It would be good that if compiling options are changed or removed, full compiling would have to be forced.

In the same way, if linker options or libraries are changed or removed, new linking would have to be done.

I think the same would have to be done when in "Build methods", INCLUDE, LIB and PATH - executable directories are changed, removed or reordered.
