Hello Didier

Sorry for the late answer. The program works perfectly in Windows too with MinGW without (almost) any change.

Now in main.cpp, method doCompare(), there is:
tcc.AddIncludePath("/usr/include");
tcc.AddLibraryPath("/usr/lib");just put the adequate paths for Windows like "Tcc\\lib\\include" and "Tcc\\lib\\lib".

It is not possible to compile MSC as it does not let declarations with dynamic allocation:
T columnData[nbRows];
Some comments:
- In main.cpp, line 254, it seems to have a call to getDataType without arguments
- In GUI_APP_MAIN, when run without arguments, its called 12 times TRACE_INFO() that calls PromptOK().
