Hi Rett,

By compiling "in GUI mode" I meant "with GUI flag", sorry for being imprecise

The linking problem should be solvable easily just by overwriting the default value of LDFLAGS. Leaving it empty should work just fine for starter. So now the command line should be: `make -f upplib/lpbuild/Makefile CXXFLAGS="-fno-PIC" PKG=ide "FLAGS=GUI GCC SHARED NOGTK" DIRS=upplib LDFLAGS=`

If that works, you can also try `LDFLAGS="-Wl,-s"`

Honza
