Koldo, Honza

Perfect. I used the Setup->Build methods to inform the linker about LIB directories and it works.

Thank you for your help

Where can I find info about the various goodies hidden inside the Upp namespace? This will be very helpful as I'm quite unaware of the hidden jewels in the framework.

Quote:I am looking at the Format function which is in util.cpp

This and few other functions have no mention anywhere in the documentation. Is there a place where all the available functions are listed and their parentage?

Is there some kind of a function browser that can be handy? Is ^N the answer?

Regards
