ok

here it is the code

```
string printvars(vector <string> & vars)
  {
    string out;
 // out+="writefln(";
    bool first = true;
```

I press ctlr-j on first.... this is in package tracecpp

What happens?

Another file comes up pcre.h

```
get_first_set(const pcre *code, const char *stringname, int *ovector)
{
const real_pcre *re = (const real_pcre *)code;
int entrysize;
char *first, *last;
```

pcre.h is in package pcre which I created.

Here it is. Is it good enough?
