Zbych wrote on Fri, 10 September 2010 03:15Hi,
Is it normal behavior or this smtp server is odd?

As I know, "from" field in SmtpMail is just for information, maybe the package uses the part of string to define default SMTP-server (poczta.onet.pl). Always use domain/host method for alternative SMTP-server (in your case - smtp.poczta.onet.pl).

I don't have TheIDE at work =(sorry, if I wrong.

Best regards,
Anton
