Subject: is there way to call a procedure when the focus is lost?
Posted by aftershock on Sat, 25 Sep 2010 21:33:57 GMT

Hi,

I use EditField I would like to handle the event of losing the focus..

I know there is one way of overriding the LoastFocus() virtual function.

Is there more simple way?

E.g. myeditfiled.Whenlostfocus <<= THISBACK()

would be simple, but it does not work....

Thank you.
