Hello Mirek

Well, no problem, as it seems the pixels are not formatted exactly the same.

Finally I have focused this way. This a sample:

```
player.WhenFrame = THISBACK(OnFrame);      // OnFrame user function to be called every
time there is a new video frame
```

...

```
void OnFrame(SDLSurface &surface) {          // SDLSurface is a new class to handle SDL
painting. surface includes the video frame bitmap
    ImageDraw iw(100, 40);                  // Sample U++ paint
    iw.DrawEllipse(0, 0, 100, 40, Green());
    iw.DrawText(35, 10, "U++", Arial(18).Bold(), Black());

    surface.Lock();
    surface.DrawImage(iw, 20, 20, Black());    // Copy the drawn U++ to SDL
    surface.DrawLine(0, 0, surface.GetWidth(), surface.GetHeight(), White()); // Directly draw
other things
    surface.Unlock();
}
```

Result:
