Anyway sorry, it looks very well!

Last two petitions :

- Now the labels are printed using `AsString()`. Could it be possible to set a user defined formatting function?

Imagine this case. The slider uses seconds and there are a major tick every minute. I would prefer to put "1" instead of "60" and so on:

- In addition, when it is clicked outside the thumb, it is called to `Inc()` or `Dec()`. Would it be possible instead, to move the thumb to the position that has been clicked?. This means the user wants to go to that position (imagine your are using VLC )
