Subject: It's a little strange for zooming GridCtrl column layout width

I found it's alway VertLayoutZoom even setting Width.
so I just fix it by this:

```
GridCtrl::ItemRect& GridCtrl::ItemRect::SizeH(int n)
{
   hidden = n == 0;

   n = Ctrl::VertLayoutZoom(n);

   if(!hidden)
   {
      if(n < min) { n = min; ismin = true; }
      if(n > max) { n = max; ismax = true; }
   }
   else
      n = 0;

   size = nsize = n;
   return *this;
}
GridCtrl::ItemRect& GridCtrl::ItemRect::SizeW(int n)
{
   hidden = n == 0;

   n = Ctrl::HorzLayoutZoom(n); //modified

   if(!hidden)
   {
      if(n < min) { n = min; ismin = true; }
      if(n > max) { n = max; ismax = true; }
   }
   else
      n = 0;

   size = nsize = n;
   return *this;
}

GridCtrl::ItemRect& GridCtrl::ItemRect::Width(int n)
{
   return SizeW(n); //modified
}

GridCtrl::ItemRect& GridCtrl::ItemRect::Height(int n)
{
```

```
    return SizeH(n); //modified
}
```
Maybe my code can be more clear.
