Hello Didier

Maybe this could serve you:

Report r;

```
r.NewPage();
Topic t = GetTopic("topic://MyPackage/MyReport$en-en");
String qtf = t.text;
Image image = scatter.GetImage(2);
{
    DrawingDraw dw(width, height);
    dw.DrawImage(0, 0, width, height, image);
    QtfRichObject pict(CreateDrawingObject(dw.GetResult(), Size(width, height), Size(width,
height)));

    String qtfG;
    String token = "[Graph]"
    int pos = qtf.Find(DeQtf(token));
    qtfG << qtf.Left(pos) << pict << qtf.Mid(token.GetCount());

    r << qtfG;
}
```

The report design is done in Topic t, that contains a "[Graph]" to be replaced by the Scatter in image.
