Javier,

I do not agree with you.

U++ project have lack of clear ToDo list(documentation, new functionality, etc). This lack exists because everybody have his work. We contribute to U++ only when we have free time, correcting the existing packages or create new packages and decide to share our work to others.

Ion.

281264 wrote on Mon, 04 October 2010 12:35We can see the limited actual impact of U++; in view of this, a table a question to the U++ creators/developers: what is the strategy behind U++? What has been U++ developed for?

which allows creating commercial applications without LGPL related restrictions. But unless the popularity of U++ increases, U++ is doomed not to survive very long.

So, Mirek et al., what do you think?

Best wishes,

Javier
