fudadmin wrote on Sat, 29 April 2006 19:52I don't know how much useful for your case but you can try to study ide/Custom.cpp:

```
class CustomOrder : public ArrayCtrl::Order {  
public:  
    virtual bool operator()(const Vector<Value>& row1, const Vector<Value>& row2) const {  
        for(int i = 0; i < 3; i++)  
            if(String(row1[i]) != String(row2[i]))  
                return String(row1[i]) < String(row2[i]);  
        return false;  
    }  
};
```

and related stuff...

Oh my God ...
I guess I'll continue to live with an unsorted columnlist
