```
class CustomOrder : public ArrayCtrl::Order {
public:
virtual bool operator()(const Vector<Value>& row1, const Vector<Value>& row2) const {
    for(int i = 0; i < 3; i++)
        if(String(row1[i]) != String(row2[i]))
            return String(row1[i]) < String(row2[i]);
    return false;
}
};
```

and related stuff...

Oh my God ...
I guess I'll continue to live with an unsorted columnlist
