Subject: Question to UPP developers: the issue with windows rendering (Windows XP)
Posted by porto on Tue, 12 Oct 2010 07:05:57 GMT

There is a strange issue with UPP windows rendering: the window title bar becomes rounded shape (themed) not immediately, but first rectangle is drawn. Animated GIF File is attached. Native applications that use WinAPI and QT apps don't have this issue. It's a little bit annoying. Can you explain or fix it?

Sorry for bad English.
