isnt there any other way to declare TupleX Moveable explicitly whenever its content is Moveable? somehow with template specialisation? so a user wanting to use it in such way simply needs to declare

```
NTL_MOVEABLE(Tuple2<Foo, Bar>)
```

and then can use

```
Vector<Tuple2<Foo, Bar> >
```

BTW:

i've noticed that the TupleX(const A& a) : a(a) ctors are not used..is there a reason for that? its quite nice to be able to add things like

```
Array<Tuple<Foo, Bar> > arr;  
arr.Add(new Tuple2(foo, bar));
```
