I have examined in great detail other applications - native, QT apps, and I did not notice anything similar.

There is one screenshot from my video. (VirtualBox+clean WinXP)

In this case, even if the problem with window behind - it's UPP app's window too.

If you want to notice it, try:

Quote:I found a better way to see this issue.

Download this app (it slows down the CPU):

<http://www.cpukiller.com/cpukil305.zip>

install it, set the "Slow Down Factor" (I set it on 95%), start slowing down CPU. Now, this issue will be visible very well.
