Subject: Using BLITZ in release mode Posted by Novo on Fri, 15 Oct 2010 17:16:20 GMT View Forum Message <> Reply to Message

Previously BLITZ wasn't used in Release mode because that was leading to big executables caused by inefficient linking. Since somebody suggested using of -ffunction-sections -fdata-sections -WI,--gc-sections options that shouldn't be a problem any more (IMHO).

Unfortunately, an attempt to enable BLITZ for Release mode in the Build Mode configuration doesn't seem to affect build process. TheIDE still continue to compile packages file by file.

Is there a way to enable BLITZ in Release mode?

TIA
