Quote:If you run in terminal with non GUI then in terminal you can view only last 3XX rows.  
Try to put your output in file and count rows.

Thanks, but I think that is not the problem. Because when I do it:

```
int i = 0;  
while(sql.Fetch())  
i++;  
Cout() << i;
```

I get the same result: i == 345.

I am almost certain that the problem is in the column buffer size. But where and how to increase it, I have no idea.
