Quote:If you run in terminal with non GUI then in terminal you can view only last 3XX rows.

Try to put your output in file and count rows.

Thanks, but I think that is not the problem. Because when I do it:

int i = 0;

while(sql.Fetch())

i++;

Cout() << i;

I get the same result: i == 345.

I am almost certain that the problem is in the column buffer size. But where and how to increase it, I have no idea.
