Quote:If you run in terminal with non GUI then in terminal you can view only last 3XX rows.
Try to put your output in file and count rows.
Thanks, but I think that is not the problem. Because when I do it:
int i = 0;
while(sql.Fetch())
i++;
Cout() << i;
I get the same result: i == 345.
I am almost certain that the problem is in the column buffer size. But where and how to increase it, I have no idea.
