to show a bit more of the inconsistantcy:

```
Vector<Value> vv;  
vv << 123;  
vv << "Hallo";
```

```
ValueArray va(vv); //picks vv, ValueArray::Data contains the Vector, ValueArray ref count  
references the VA::Data
```

```
Value v = va; //the Value now additionally references the ValueArray::Data
```

```
RLOG(v);
```

```
ASSERT(v.Is<ValueArray>()); //OK, but should be ERROR
```

```
ASSERT(IsValueArray(v)); //OK, evaluates ::Data Content directly
```
