it even works with just

```
NAMESPACE_UPP
template<> void Xmlize(XmlIO xml, ValueArray& v)
{
    if(xml.IsStoring())
    {
        XmlizeStore(xml, v.Get());
    }
    if(xml.IsLoading())
    {
        Vector<Value> vv;
        ::Xmlize(xml, vv);
        v = ValueArray(vv);
    }
}
END_UPP_NAMESPACE

REGISTER_VALUE_XMLIZE(ValueArray);
```
