Subject: Problem with Calendar control

Hello,

I have a question related to the Calendar control.
When I put a Calendar control on a layout window, using the designer, I can resize it and it scales perfecly, even when I make it smaller than the 'standard' size (the size which it has when I drop it on a layout window).
However, when I run the application with a Calendar control that I made smaller than the standard size, it does not scale, but gets clipped.
Should I call some method to make the scaling happen? I already tried Layout and Refresh, even SetRect, but to no avail. It just remains clipped, rather than scaled.

Regards

frank
