Subject: How can I detect Button press / release
Posted by jerson on Sat, 23 Oct 2010 16:22:38 GMT

Greetings everyone

Can someone point me to a callback for button which does the following

WhenPush - I know this one
WhenRelease - does this exist?

I am trying to implement a feature which needs a particular pin on an I/O device to be high as long as the button is pushed/repeat action. The pin has to go low when the button is released.

How can I achieve this?

Thank you for your attention
