Subject: U++ inspires other projects and languages

Hi,

I noticed there is a project on http://dsource.org that proposes new associative array
implementation for D language based on the ideas of U++ Index container. The description can be
found here: http://dsource.org/projects/aa/wiki/ArrayIndex . It is good to see that U++ inspires not
only other frameworks but even other languages. IMHO it shows that U++ is really as good as we
all think

Best regards,
Honza
