Subject: how to communicate between windows? Posted by bonami on Tue, 02 Nov 2010 09:18:55 GMT

I have two classes inherited from TopWindow. class 1 need to tell class 2 to go back or forward in processing. they OpenMain() then I use Ctrl::EventLoop().

## Solution 1,

class 1 envoke a member of class 2. class 2 needs a private lock. I would rather not use this solution.

## Solution 2,

From MS' view, class 1 can SendMessage() or send an event to class 2. How to achieve this in U++? How to change class 2 (TopWindow)'s processing?

Thank you.
