After a bunch of hours (plus updating to MSC10 and U++ 2827) got the thread to work.

```
 Thread work;

// At the end of file chooser to read the lines in the thread:
   work.Run(THISBACK(Work));

  void Work(){
     ...
 while(!in.IsEof()){
  ...
```

upp/Reference/GuiLock was something I could open and run.

Thanks for the help Honza!
