If I have Button button; in my code and I put the cursor on Button, is there any quick way to go to the help topic for the Button widget.

Similarly, with button.VCenterPos(40);
if I use Alt J with the cursor on VCenterPos, I get taken to the definition of VCenterPos and then if I hold the mouse over the little green square in the margin I can see a description of what the function does. Is there any other (or better) way to see the description of the function.

Graeme
