Well, truth is that we gave up maintaining uldar when ldd became fast enough....

Mirek

What is ldd tool being referred to in this context?

Sorry, yes, 'ld'.

Quote:

Do you mean the gnu ld linker or something else? I still find the gnu ld linker pretty slow btw...  
version is 2.19.1 bundled with gcc441

Well, in Ubuntu running in virtual session, link time is about 1.5s for typical U++ GUI example app.  
I think it is too acceptable to spend any more time with uldar...
