Still could be better IMO. Too much code to be written. What about something like:

```
PROPERTY(EditInt, "min", IsNumber(param), MinMax(param, o.GetMax()), GetMin())
```

also

```
REGISTERPROPS(EditInt);
```

is not needed, you can squeeze that to CTRL_PROPERTIES

And with a little effort, you can move base class parameter to CTRL_PROPERTIES too and make END_CTRL_PROPERTIES parameter-less.
