Hi,

IconDes/RGBACtrl.cpp:155: internal compiler error: in expand\_expr\_addr\_expr\_1, at expr.c:6336  
This usually means that the error is in the compiler not in the U++ sources. What version of the compiler are you using? There should be gcc 4.5.1 in OpenSUSE, if you have something older I suggest you to try updating it and try again.

Or save yoursels the hassle of compiling and download latest stable release in rpm package here:  
<http://sourceforge.net/projects/upp/files/upp/2791/>

BTW: is there some special reason why you try to compile version 2716? The latest version is 2901 and the latest stable release 2791...

Best regards,  
Honza
