
Subject: Label box has no disabled look

Hello,

When a labelbox is disabled, the text does not get the disabled text color. You simply cannot see it is disabled.

I stepped a bit through the sources and, to my humble knowledge, the best way to fix this is change the labelbox constructor to:

```
LabelBox::LabelBox()  
{  
    SetInk(Color(Null));  
    SetVAlign(ALIGN_TOP);  
}
```
