Hi

I reply to myself as sometimes some effort given to this marvelous tool that is U++ can lead to solution by oneself. The way is to create a tab of EditString and to assign it to the first column (column 0) to be edited on the selected line :

```
Array<EditString> editSkill;  
Array<EditIntSpin> levelEdit;  
editSkill.Add();
```

```
for(int i=0;i< qsGridCtrl.GetColumnCount()-1;i++)levelEdit.Add().MinMax(0,3 );
```

```
qsGridCtrl.GetColumn(0).Edit(editSkill.At(0));
```

```
for(int p=1;p< qsGridCtrl.GetColumnCount();p++)qsGridCtrl.GetColumn(p).Edit (levelEdit.At(p-1));
```

```
qsGridCtrl.StartEdit();
```

That works perfectly so this topic is closed. Hoping this could help other developers.
