Hi,

I use XMLNode to build an XML tree and AsXml to convert it into text.

The text nodes can be encoded in different 8bit charaterset sets .

How can I achieve so that that the character sets are kept?

At the moment, I tried to set it  ASCII but it caused an exception when eastern character set..

All I want is the output xml should keep all characters as they are (I want no conversion), I do not want utf8.
Is it possible to do it in this framework?

Thank you,.
