Subject: Re: HotSpots usage HOWTO
Posted by kohait00 on Mon, 13 Dec 2010 21:59:27 GMT

playing around a bit i found out some general things:

* blue hotspot seems to be hotspot2 and is not used, or at least i couldnt get it to mean sth logical

* thats why blue hotspot needs to remain in top left corner, default (0,0)

* red hotspot, maybe hotspot1, is the real one used.

usage:

red hotspot marks the marging of area in Image, which can be stretched, and thus separates it from area that is fixed drawn without stretching.

see the quick dirty drawing below:

while the respective corners are drawn as is, the layers that lay inbetween are streched/repeated in the directions indicated and thus create a circular margin.

the area in the center is seen as an Image which is drawn resized into the respective remaining space in destination.

correct me if sth is wrong. it's quite important to have this clear.
