i'm still wondering about those templated return type callbacks that exist..do they have any practical usage besides making arbitrary methods (at least up to Callback1) usable for Callback api? i mean, having a int MyClass::DoSth() is not able to be set as a callback target otherwise..

does anyone have some experience with it?

it'd be great to specify this where needed, maybe sth like

```
Callback cb = THISBACK(IgnoreReturn(MyMethod));
```
