Windows version works but partially in my computer (Windows XP SP3), for it is happening the following:

- 1.- the lower Windows Tool Bar is not occupied;
- 2.- when pressing F11 successively, the size of the minimized windows is smaller and smaller; why?
- 3.- I reckon that the correct initialization of `isFullScreenModeActive=false`; Is it correct?
- 4.- I do not understand this:

Quote:Edit from 5 min later:

To go across all screens just change:

```
cx = GetSystemMetrics(SM_CXVIRTUALSCREEN);  
long cy = GetSystemMetrics(SM_CYSCREEN);  
cy = GetSystemMetrics(SM_CYVIRTUALSCREEN);
```

So in my case it partially works. Is there any special consideration that I am not aware?

Thank you.

Best wishes,

Javier
