Hi,

I have been testing OpenMP with the MSC9 compiler in simple examples; it works in non debugging option; the debugging is not possible due to the non availability of the file vcomp90d.dll; I reckon the file is not included in the free version of the MSC. Any suggestion?

On the other hand, I wonder whether in U++ there are functions (apart from the thread et al.) that do -to a certain extent- similar tasks: i.e. CoWork.

Have you guys experience using OpenMP in U++?. Any hint/suggestion?.

Cheers,

Javier
