Hi Javier,

I am using OpenMP on Linux without any problems, but I never tried on windows. Maybe you could try with TDM mingw. r just have a look at the internet, I am pretty sure you could find the required dll for download somewhere - just remember to ask your lawyer if it is legal to download it

Also some quick googling revealed a post saying that using `#include <omp.h>` instead of `#include <openmp.h>` solves this situation, but as I am Linux only I can't confirm that

Best regards,
Honza
