Well, thinking about it, the most likely hypothesis is that you have screwed stack or heap somewhere in your code.

Should be testable by putting this to the beginning of MAIN.

Quote:

But what SDK do you mean? Do you mean VC++ express edition?

Alex

The one that is recommended when installing U++.

[http://www.ultimatepp.org/app\\$ide\\$install\\$en-us.html](http://www.ultimatepp.org/app$ide$install$en-us.html)

It also contains C++ compiler... So no need to install VC++ (unless you want to use it as 'external' debugger).

And it is the one and proper C SDK for Windows anyway.
