Didier wrote  
In you're case, just use  
`Mutex::Lock( <you're mutex> )`  
It should do what you need.

Quote:The `Mutex::Lock` class that Mirek mentioned, creates a temporary mutex  
This is not true, a reference is used so the behavior is exactly the same as my template.

uh, oops, you're so right. The code Koldo needs is then

```
Mutex::Lock xyz(data.m);
```
