
Subject: Re: PrintJob does not works on "large project"

The problem arises from the code

```
printjob.cpp
::Execute0

if(!PrintDlg(&dlg))
{
    DWORD x= CommDlgExtendedError();
```

the CommDlgExtendedError returns 0x1008 which means
"A default printer does not exist."

How to solve this?

Again, the following small project runs well...

```
#include "teste2.h"
```

```
teste2::teste2()
{
    CtrlLayout(*this, "Window title");
    btBut <<= THISBACK(OnBut);

}

void teste2::OnBut(void)
{
    PrinterJob pj;
    Draw& w = pj;
    w.StartPage();
    w.DrawText(0, 0, "Hello world!", Roman(100));
    w.EndPage();

}

GUI_APP_MAIN
```

```
{  
 teste2().Run();  
}
```

It seems that it is something related with that project/executable...

Thanks

Alex
