Hi all,

I am looking for RepGen, that is what I am searching to do before to find it.

Only one question: the QTF template file are made by what ? My problem is that I don't found any way to insert an image directly from file (I have to open the image from a different editor and copy/paste to the qtf file...), using UWord that is coming with U++. There is any suggestet tool ?

Yhanks.
