cbpporter wrote on Mon, 03 January 2011 16:05I am trying to use ArrayCtrl in a very Excel like style. I call HeaderObject().Absolute() before adding columns and then I set the preferred width in one step. The user is free to change the width. The problem that I am having is that the ArrayCtrl won't display the horizontal scroll bar until I manually adjust the width of a column.

Do I understand you that this is feature request ("add AlwaysHorzSB() method to ArrayCtrl), not a bug report?

Another smaller problem that I am having is that the array is slow to draw, scroll and resize columns. Any tips on speeding it up? Most cell have embedded controls and some have displays attached.

How many lines are in ArrayCtrl?

Mirek
