## Subject: TabBar crash fix (very crude one, needs author to rewrite it) Posted by mr\_ped on Wed, 12 Jan 2011 13:49:04 GMT

## 2 fixes included:

- 1) "Value v = tabs[cross].key;" does crash when cross is outdated (easy to achieve by clicking with mouse on close inactive tabs without movement and fast enough ... active tab will reset cross to -1, so if last tab is active one, no crash occurs)
- 2) Close(...) should be IMO called \*after\* registered callbacks
