Hello Ion

Imagine I want to do a translation package based in Google. I would have two options:

1. I can take code from here and there and prepare a new package.

Why not, is not this BSD?

2. I can talk to you and agree a new and better Google Translation version.

I would always choose the second one. For me U++ people are colleagues. In fact I have talked with more than one about personal subjects. I count on you and I want you count on me. . I think this way $1+1 > 2$.

Of course this is my personal view. Key, nice U++ people do not think the same.

If somebody thinks that $1+1 > 2$, s/he can count on me.
