More info:

Quote:Some Managers, such as the HView Manager (a superset of the Control Manager), are implemented in C++, but Carbon remains a C API.

Also, some crazy ideas...

1. to put #ifdef checking if class/object had derived from HObject and neutralize Upp new overriding.. ?

maybe less crazy - 2. just block Upp code "travelling" into apple side? But how to separate? ... see 1 - above.
